

ABSTRACT OF THE DISCLOSURE

35 A television control system for controlling different models of hospital televisions,
has an input device for receiving an input from a person, and a controller for interfacing with
hospital televisions. The controller generates command signal groups reflective of the input,
and the command signal groups include a plurality of sequentially-generated, individual
command signals for specific operational function of a plurality of different models of
hospital televisions including ON/OFF, CHANNEL UP, CHANNEL DOWN,
40 SELECT/MUSIC, PREVIOUS CHANNEL, MUTE, CLOSED CAPTION, and CHANNEL
DIGIT operational functions.
